

## How to Install DCU-60 for Sony Ericsson Phones

Before you start:

- If you have installed anything unsuccessfully, please uninstall everything installed
- Please note, this cable does not have IC so when plugged in USB by itself, there will be NO 'Found New Hardware' Window turning up, unless you plug in with your phone which is only recommended AFTER driver and software installed OK.

Insert the Driver CD (NOT the blank fun CD) into CD ROM, it will start automatically after a couple of seconds

Please install the driver before PC Suite.

After the driver was install successfully, please go ahead to install PC Suite, the list there is for info only and does not have the full list, when not sure, please download one from SE web site, and it's free.

Trouble shooting:

1. If after installing software the cable and the phone does not click, please in Control Panel/System/Hardware device, right click 'modem'-->properties, and find the COM value of the modem (e.g. 4);
2. Launch the software, in 'settings', there is a interface for you to set the same COM value (e.g. 4) you just found, and it should work from then on...

### **Windows Vista Users:**

Please go to [www.sonyericsson.com](http://www.sonyericsson.com), select your phone model, and download the USB Driver and PC Suite for Windows Vista, unless the CD's driver is already compatible with Vista.

Please note: The instructions here may only be used for information only, the actual installation might not happen exactly as instructed, due to the product development, and various settings of PCs, and the software versions etc.

Compatible with: Sony Eticsson W950i, W810i, W900i, W550i, W800i,W710, W300, W600, W700, K800,K610i, K750i, K750, K810, K790, K310, K510, K610, K310 M600i, Z520i,M830, D750, V630i, J100c, Z540, Z530, Z510, Z525i, Z710, Z520i
